

WHERE YOUR WATER COMES FROM

O Water, Where Art Thou? Underground, that’s where.

Bryan’s water comes from the Simsboro Sands portion of the Carrizo-Wilcox Aquifer. We use nine wells and draw from an average depth of 2,800 feet at a rate of 2,000-3,000 gallons each minute. The water comes out of the ground at a temperature as high as 116°F!

During an average day, Bryan customers consume 9.3 million gallons of water. Bryan’s combined well capacity is 32 million gallons per day, or MGD; however, when customer demand approaches 24 MGD, the city begins requesting voluntary conservation measures for all customers. That’s why conserving water, especially during summer months, is so important.

Movie poster inspired by *O Brother, Where Art Thou?* (2000). Pictured:
